

Transforming the world and wasted organic materials

Samuel GROSSMAN, WFEO, CO, United States

WFEO

Make beneficial use of resources considered to be waste products, lessen harmful greenhouse gas emissions due to land-filling of organics and reduce the need for fossil fuels. Creating a carbon-neutral fuel that has a long-term future. Building facilities that convert organic materials into pipeline-grade biogas and other sustainable energy products. Feedstock varies from manure, industrial and food processing byproducts, and other agricultural waste.
