

Achieving Global Engineering Education Standards

J.P. MOHSEN, American Society of Civil Engineers, KY, United States

Future workforce (4)

The WFEO Committee on Education in Engineering (CEIE) has been actively working towards finding ways to address achievement of UN Sustainable Development Goal 4, which pertains to Quality Education in a global setting. The education goal deals with making basic education for various world population around the globe. The CEIE discussions and activities have embraced ways that engineering education can achieve a common level of excellence in which borderless qualifications, industry-education collaboration and workforce development becomes common place. The proposed presentation, will outline a summary of the discussions that have already taken place among the national members, as well as specifying the ways in which this goal will be pursued in the near future.
