

## **Climate resilient infrastructure in a city environment”**

Davide STRONATI, Mott MacDonald, United Kingdom

WFEO

A report from the World Bank reported that almost 75% of losses are attributable to extreme weather events, and climate change threatens to push an additional 100 million people into extreme poverty by 2030.

The United Nations Sustainable Development Goal (SDG) 13 on climate action aims at strengthening resilience and adaptive capacity to climate-related hazards and natural disasters in all countries.

Population growth and rapid urbanisation are driving the increased vulnerability of large settlements to disaster risks.

This presentation will therefore touch on promoting climate resilient infrastructure and scaling up the resilience of cities in developing and developed economies.
